# Basic Structure of a Web Page (Module 1 and 2)

1. Create a webpage named "florist.html" (webpage for a florist), using HTML5 structural elements like header, nav, article, section, aside, footer etc.
   - Webpage should contain florist name at header (name of your choice).
   - Place 3 navigation links at nav bar named:
     - Home
     - Flowers Gallery
     - Contact Us
   - Display a flower bouquet gallery in aside bar.
   - Write some text about flower shop, shop's owner and shop's clients using section and article tags.
   - Display copyright information of webpage and contact information at footer.

Required Output:

2. Create a home page layout as shown below using HTML5 structural elements.
   Required Output:
